VICTORY GARDENING IN THE UNITED STATES

A List of References to Publications Designed to Aid the Gardener

Compiled by
Magdalene R. Newman and Nell W. Smallwood

This list contains selected references to books and pamphlets and publications of State and Federal agencies on gardening. The list is concerned primarily with the planting and cultivation of vegetables and some small fruits, but it includes also references on garden pests and the storage of garden produce.

The publications listed are, for the most part, available in libraries. United States Department of Agriculture publications are available free of charge as long as the Department's supply lasts. State agricultural experiment station and extension publications are ordinarily available free of charge to residents of the respective States. Photoprint copies of pamphlet material not available from the States may be obtained from the United States Department of Agriculture Library for the cost of reproduction.

No attempt has been made to make the list all-inclusive. Periodical articles, the numerous pamphlets issued by commercial concerns, and publications on the growing of individual crops have been omitted. As a rule only the latest edition of a publication has been listed. Except in the list of books, the period covered is 1941 to date.

Items marked with an asterisk (*) have not been examined. Call numbers following the citations are those of the United States Department of Agriculture Library.

The helpful suggestions of R. J. Haskell of the Extension Service and W. H. Youngman of the Office of Foreign Agricultural Relations are gratefully acknowledged.
